## What is FLOW?

FLOW is a **Workflow Management Platform**, specifically built to automate different map making processes. Flow:

- Offers a platform to customize map making processes and easily deploy them (without making any changes to the code).
- Automatically creates tasks and routes them across different teams involved in the map making process.
- Provides a pre-built Programmatic interface to communicate with MCP and SO systems.
- Provides dashboards for real-time tracking and analytics BI reports.

Please refer to the **FLOW Overview** and **Demo Video** to understand in detail.
